

SUMMER PROFESSIONAL PROGRAM

The **SUMMER PROFESSIONAL PROGRAM** at SM Energy Company is focused on providing quality work experience in one of three areas: Engineering, Geology, or Land, working with other experienced professionals in those fields. The program is "project oriented" such that most projects will take several weeks to complete. The emphasis is on training by providing projects to educate you on our Company, the oil and gas industry, as well as what it means to be a contributor to the Company's success. At the end of the Summer Program you will have an opportunity to present your findings to senior management as well as your peers and other professionals in your field. Due to the project focus of these positions the majority of the Engineering and Land participants will be juniors or seniors and those working in the Geologic area will be first or second year graduate students.

The Summer Professional Program will focus on one area in order to provide a quality experience. The areas that you may be assigned are as follows:

> **Engineering:**

- Drilling
- Production
- Reservoir

> **Geology:**

- Geology
- Geophysics

> **Land:**

- Land Management

The primary goal of the Summer Professional Program is to provide real-life work experience for you, quality projects to add value for the Company, and a solid base of understanding for future work in the petroleum industry.

Summer professional opportunities are available in select regional offices located in key oil and gas producing basins. If you are interested in this type of program we encourage you to contact your placement office to arrange an interview.
